Innovation You Can Trust
In The Most Challenging Conditions

Cooper Interconnect's line of QPL qualified and Commercial-Off-The-Shelf (COTS) connectors offer exceptional durability and versatility for many military and industrial mid-range power needs.

The QPL versions, designed and built under the WPI General Connector brand, have endured over 40 years of trusted ground support field use. With the acquisition of WPI General Connector, Cooper Interconnect has expanded the line to offer custom shell configurations, including Stackable Power connectors, Dual Entry and Dual Header connectors. These exclusive designs provide cost and space savings in both new design and retrofit applications.

Weatherproof seals, rugged construction, and premium quality components have allowed Cooper Interconnect's products to excel when the requirement is mission-critical.

The value-engineered COTS 55181 power family offers the same outstanding performance as our QPL military workhorse, at a more economical price. Along with direct equivalents for our most popular QPL configurations, Cooper Interconnect offers cable adaptor designs that enable cable shield termination for various cable sizes in the field or factory.

CONNECTIVITY

For your toughest mid-range power connector applications, look to **Cooper Interconnect** for the right solution.

M55181 Series	QPL qualified to MIL-DTL-55181, latest version. MW Series follows U.S. government part number designation.
GC55181 Standard Series	COTS version of the M55181 or MW Series.
GC55181 Adaptor Series	Similar to the GC55181 Standard Series, offers three cable shield adaptors to support a wide range of cables.
M12520 Series	Meets all the requirements of MIL-DTL-12520. UW Series follows Cooper Interconnect's part number designation.
Custom Shell Configurations	The Stacking, Dual Header, Dual Entry and SB Series connectors are Cooper's customized shell configurations.
Filtered Connectors	MIL-DTL-55181 interface connectors with filters to suppress unwanted frequencies.
Accessories & Tooling	Dust Caps, Spanner Wrenches and Termination Instructions.

INNOVATION

Markets

The Cooper Interconnect series of mid-range power connectors has been used in rugged, harsh environment applications from the time that we were known as General Connector (GC). The GC designation, remains on many of the old specifications today.

The M55181 panel mount pin connectors, long the power connector of choice, are used as the Output power connection for SINCGARS (Single Channel Ground and Airborne Radio System) and the panel mount socket connectors are used as the Input power connection. The 18-pin M55181 connectors are used as the audio/data connectors.

The JTRS (Joint Tactical Radio System) radios continue to use the M55181 connectors for power requirements.

Applications

These connectors are used in a wide variety of other power systems, surge suppression systems and control circuits.

The stacking M55181 connector enables two radios or other devices to draw power from one source with “no extra parts needed and no parts left over.”

Dual Entry connectors enable power to be split from one source to two devices, similarly to the stacking connector.

SINCGARS Vehicle Adaptors

MIL-DTL-55181 connectors are used for the power in and power out functions to mount a SINCGARS radio in a vehicle. The MIL-DTL-55181 18-pin connector is used as the audio/data output.

Mounted SINCGARS Vehicle Adaptor

SINCGARS Vehicle Adaptor Tray

Product Configurator Guide

Use the Product Configurator Guide below to find the best solution for your specific application. Black text means the product configuration is available with normal lead times. Red text means the product configuration is possible to manufacture. Consult factory for details.

Note: Black Nickel plated parts are RoHS Compliant.

MIL-DTL-55181 Power Connectors

M55181/7-0X

Product Overview

With over 40 years of field-proven reliability, Cooper Interconnect's MIL-DTL-55181 (MW Series) power connectors are designed to meet the most stringent requirements while withstanding the extreme range of environmental conditions encountered by ground support equipment.

Resistant to contamination of dust, dirt and water, these workhorse connectors also are engineered to provide the ultimate resistance to shock and vibration via the center-locking screw, which is easily secured by turning the mechanized fold-down, wing-blade handle.

The Cooper Interconnect MW series is the predecessor to the MIL-DTL-55181 specification. When the M55181 specification was written by the government, they derived the spec from the existing Cooper Interconnect and General Connector MW product line. The cross reference from MW part numbers to the M55181 part numbers is available on page 13. By default, the MW part numbers also meet the requirements of the MIL-DTL-55181 specification.

Features and Benefits

QPL certified - The M55181 and MW connectors are government qualified per MIL-DTL-55181.

Versatile Configurations – The M55181 series are available in 4-, 9- and 18-contact versions, as plugs or receptacles. They support cable-to-cable, cable-to-panel, and jam nut panel mounting.

Weatherproof - Heavy-duty gaskets and O-rings provide a watertight seal to prevent moisture, dust and dirt contamination and to maximize reliability.

Durable Construction – Time-tested, field-proven reliability. Corrosion-resistant, aluminum alloy receptacle and high-impact solid brass plug construction resist impact damage. Heat-tempered nosepiece is made of hardened alloy steel for enhanced impact protection for rough handling.

Superior Electrical Connections - Precision contacts have gold over nickel plating providing positive electrical connection with minimum voltage drop.

Easy to Use - Receptacle and plug mating is accomplished quickly and easily by turning a center-locking, double-lead screw with an easy-to-grasp wing-blade handle. Vibration-resistant, secure locking mechanism will not back out.

Reliable - Worry-free 500 mate/unmate cycle rating.

COTS GC55181 Power Connectors

Standard COTS GC55181/3-0X

Product Overview

For military and industrial power applications in harsh environments where cost containment is more important than government certification. Cooper Interconnect's Commercial-Off-the-Shelf (COTS) version of the M55181 family provides the same performance as the certified version of the M55181 power connectors, but at an economical price.

Features and Benefits

Value-Engineered Solution - Same performance standards as Cooper Interconnect's MIL-DTL-55181 power connector family, with cost savings built in.

Configuration Options - Available in two primary configurations:

1. Standard COTS 55181 for seamless integration into M55181 type applications.
2. Cable adaptor COTS 55181 for a wide range of shielded cable configurations.

Rugged Construction - High-strength aluminum alloy maximizes corrosion resistance and tempered nose piece minimizes damage from high impact forces. Provides weather and waterproof seals for protection against environmental contaminants, with secure mating options.

- Center-locking, double-lead screws allow easy, positive, and secure mating.
- Mounting flexibility for cable-to-cable, and cable-to-panel applications.
- Gold over nickel contacts provide positive, efficient, electrical connections.
- Worry-free, 500 mate/unmate cycle rating.

COTS power connectors excel in the harshest conditions.

COTS GC55181 Power Connectors

Features Overview

Standard COTS 55181

COTS GC55181 Power Connectors

These power connectors are used in rugged applications that require waterproofing and extended life for communication equipment and industrial instrumentation.

Specifications are for both COTS and Adaptor versions.

New Black Nickel (RoHS) Plating

Specifications

MATERIALS AND FINISHES	
Shells	
Plugs	Aluminum alloy body, chemical film per MIL-C-5541.

UW Power Connectors

Features Overview

UW Connectors

UW Power Connectors

UW Connectors

The UW connectors meet all requirements of the MIL-DTL-12520 specification. These connectors are rugged, proven reliable, and are designed for power and control interconnections. Featured is a center-locking, double-lead screw for maximum reliability, with a fold-down, wing-blade handle. They are waterproof and can withstand the extreme range of environmental conditions encountered by ground support equipment.

Features and Benefits

Versatile Configurations – Available in three plug shell sizes styles (small round, small cathedral and large cathedral). The UW series is available in 4-, 9-, 14-, 19-, and 30-contact versions configured to support cable-to-cable, cable-to-panel, and jam nut panel mounting.

Weatherproof - Heavy-duty gaskets and O-rings provide a watertight seal to prevent moisture, dust and dirt contamination and maximize reliability.

Durable Construction – Time-tested, field-proven reliability for over 40 years. Corrosion-resistant, aluminum alloy receptacles and high-impact solid brass plug construction resist impact damage. Heat-tempered nosepiece is made of hardened alloy steel for enhanced impact protection in the event of mishandling.

Superior Electrical Connections - Precision contacts are gold over nickel providing positive electrical connection with minimum voltage drop.

Easy to Use - Receptacle and plug mating is accomplished quickly and easily by turning a center-locking, double lead screw with easy-to-grasp wing-blade handle. Vibration-resistant, secure locking mechanism will not back out.

Reliable - Worry-free 500 mate/unmate cycle rating.

UW1326MD17

UW Connectors

UW power connectors support military communication systems.

Stackable Power Connectors

Features and Benefits

Exclusive design allows multiple radios to draw power from a single M55181 receptacle.

Space-saving design eliminates the need for “Y” cables or other external power splitting apparatus.

Mates to standard M55181/4-01 and M55181/2-01 receptacles.

Accommodates any M55181/3 or /1 series plug from a second radio, no need to retrofit existing cables.

Robust aluminum housing, cadmium plate an olive drab chromate stand up to use in harsh environments.

Precision contacts, gold over nickel.

Same ruggedized features as QPL M55181 mid-range power connectors.

Worry-free 500 mate/unmate cycle rating.

Specifications

MATERIALS AND FINISHES

Mating Instructions

1. Mating to the receptacle is accomplished quickly and securely by turning the stackable M55181's drawscrew – no additional tools or fasteners needed.
2. Back cap is removed by rotating cap counter-clockwise using the knurled section, exposing the secondary receptacle interface.
3. The ground power assembly is then mated in the traditional manner to the stackable connector.

For detailed termination instructions, request Assembly Instructions A1-001.

CI55181/8-DH-01

Dual Entry and Dual Header Stacking Connectors

Features and Benefits

DE (Dual Entry) provides two cable entry points into one housing for cable plugs (/1, /3, /5, /7). Available in 90° and 75° entry points.

DH (Dual Header) provides two mating faces (panel receptacles, /2, /4, /6, /8) within one connector. This enables a cable plug (/1, /3, /5, /7) to mate to each side.

Mates to standard mid-power (M55181/X, GC55181/X, and CI55181/X) connectors and assemblies.

Robust aluminum housing, cadmium plate and olive drab chromate stand up to use in harsh environments.

Precision contacts, gold over nickel.

Provides a lower cost alternative to the traditional “Y” cables. Provides greater flexibility in cable routing options.

Same ruggedized features as QPL 55181 mid-range power connectors.

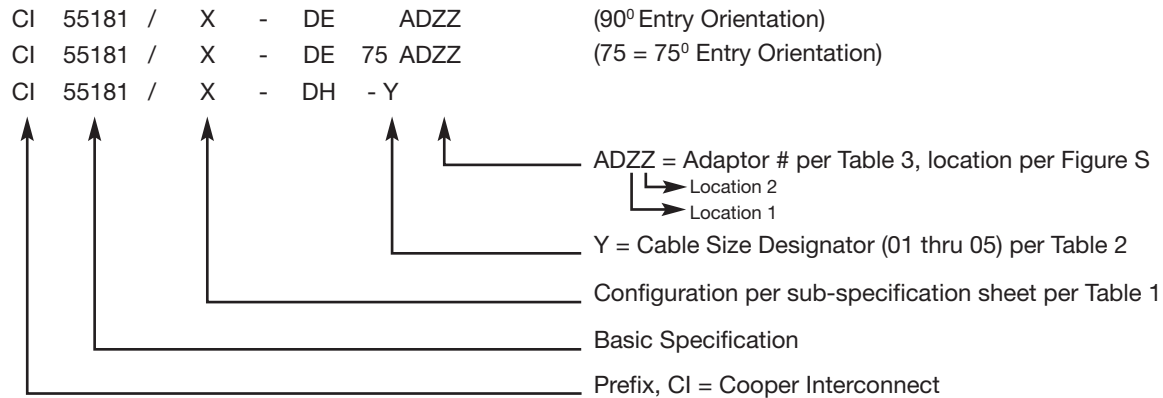

Worry-free 500 mate/unmate cycle rating.

SB Series Power Connectors

Features and Benefits

Exclusive straight backshell mid-range power connector allows cable mounting of M55181 panel mount receptacles.

Shielded ferrules enables termination of cable shields.

Mates to any M55181/1-, /3-, /5- or /7- series plug.

Sealed aluminum housing, cadmium plate and olive drab chromate for use in harsh environments. Also available in electroless nickel plating.

Gold over nickel contacts standard.

Mating is accomplished quickly and securely by turning the plug's drawscrew - no additional tools required.

Perfect for "Y" extension cables and other external power splitting apparatus.

Worry-free 500 mate/unmate cycle rating.

Filtered Connectors

Product Overview

When EMI (electromagnetic interference) issues arise, the 55181 Panel Mount connectors can be filtered to remove undesirable frequencies. The filters used are planar capacitors. Each filter surrounds the pin to be filtered and is connected to the shell for ground.

Features and Benefits

Same robust performance as the M55181 connectors.

Filter values designed to your specific requirements.

Available in all four panel mount configurations.

Contact the factory for your specific filtering requirements.

GC821-4	
GC821-1	Half Hard Brass Cad. Plate

Custom Shield Adaptor

Custom 45° shield adaptor fits all the “adaptor” style cable plugs and provides a 45° cable exit. It can be configured to exit in any direction from the plug.

Consult factory for other custom shield adaptors and custom shield ferrule sets, similar to those used on the SB series. These are used on all the “non adaptor” type cable plugs.

Cable Shield Adaptor

The mold adaptor, part #33-31P1, is a threaded adaptor that is attached to the M55181 shell. It is used in place of the standard rear end components as it provides an area to attach the cable shield by the use of a standard “band it” clamp. The assembly (M55181 and cable) is then placed in a mold creating an attractive and efficient shield and cable termination method which in some cases may prove to be more cost effective than the standard assembly methods.

33-31P1

INNOVATION YOU CAN TRUST IN THE MOST CHALLENGING CONDITIONS

Cooper Interconnect is a leading supplier of high-end audio, data and power connectors for tactical communications platforms, assuring performance in mission-critical applications. Our engineering team designs reliable connectivity solutions critical to support a Network-Centric Battlefield. We deliver proven components to support integrated communications and operations in the global arena. Through leading-edge technology and a proven development process, we give you a proven interconnect solution for the sea, land, and air from the battlefield to home.

Audio & Data Connectors

Used for transmitting audio signals and control signals in harsh environments, these connectors are fully qualified to the military specifications **MIL-DTL-55116** and **MIL-DTL-10544**. Cooper Interconnect offers a standard line of audio connectors, and excels in developing custom configurations to resolve specific application needs, including the need for high-density connectivity in a small footprint, right-angles for cramped spaces, and extended audio connectors for armour feed thru applications to mate penetrator cables. Cooper Interconnect's line of data connectors come in a variety of packages and densities. The ever present drive for "smaller, lighter, faster", leads to new packages like our new Mini Data products (pictured example is less than 0.5" diameter).

GPS Connectors

Battle-field tested and fully ruggedized for military use, our GPS connectors are the product to depend on for today's unique radio applications. Machined shells of T6 aluminum provide excellent performance and resist impact damage. Precision signal and coax contacts assure optimal signal strength with minimal loss. Our unique shape for mating shells and inserts make for an exceptional seal, meeting military water immersion requirements. Cooper Interconnect offers panel mount GPS connectors with available mates, which fit most current military GPS systems.

Filtered Connectors

Superior communications support in the battlefield means ensuring protection against electro-magnetic (EMI) and radio frequency interference (RFI). Cooper Interconnect offers an extensive line of filtered connectors in both standard and custom configurations. Filtered connectors use both Planar and Surface Mount technologies in C, LC, PI, T or extended PI configurations. Our designs meet nearly every filtration need, with custom capacitances and testing protocols available.

Intercom Connectors

Cooper Interconnect's intercom connectors are an integral part of over 120,000 major military intercom systems deployed throughout the world. The metal and overmolded shell configurations are designed to fully meet the performance criteria for **MIL-DTL-26482** specifications while minimizing space on the intercom unit.

Antenna Connectors

Our battle-field tested, rugged antenna connectors enable a broader product options for today's radio/communication systems. The antenna connectors provide a sturdy and durable mount for whip and blade-type antennae on hand-held and man-pack radios. Cooper Interconnect's space-saving design fits into the demand for smaller hand-held radios. With our sure, secure contact mating every time, you don't have to worry about performance under the roughest conditions.

Battery Connectors

Cooper Interconnect's battery connectors provide a secure connection when it's needed most. We design to demanding military and industrial standards, or can develop a custom configuration to solve your unique battery connection requirements. Standard chromate coating over 6061-T6 aluminum alloy shells and non-hermetic sealing withstands up to 15 PSI for optimal operation in rigorous applications.

55181 Mid-Range Power Connectors are Manufactured at
